

Hiramitsu Guitarworks MD series

One of the popular models in Hiramitsu Guitar, MD Series, is now available in Works Series.

MD, "Modified Dreadnought", is way beyond a traditional dreadnought shape with a cutaway.

The entire shape has been proportioned to the body line. At the forearm, the binding has been made thicker and rounded to finish off with a radiused armrest.

The balance in volume, from the 6th. to the 1st. string, one of the significant character in Hiramitsu's, is also featured in this model, making it well-suit for various play-styles, from fingerpicking to flatpicking.
